[2025 수능특강 6강 2번]

1. 다음 글의 주제로 가장 적절한 것은?

For many years, it was indeed widely believed that the adult brain was essentially ‘ set’ , with all the neurons and major connections we’d need. Sure, we learn new things and update our understanding of things all the time, meaning new connections are regularly being formed and turned over in networks governing learning and memory. But in terms of overall physical structure and major connections, the stuff that makes us ‘what we are’,the adult brain was long thought to be ‘ done’. However, in recent years there’s been a steady stream of evidence revealing that the adult brain *can* change and adapt, even create new neurons, and experiences can still reshape the brain, even as we head into our twilight years. Consider the taxi driver study, where constant driving and navigation of chaotic London streets leads to increased hippocampus size, revealing the adult brain structure is somewhat malleable.

* hippocampus: (대뇌 측두엽의) 해마
** malleable: 적응성 있는

① effects of negative life experiences on brain activity
② the solid connectivity of neural pathways in the brain
③ differences between the brain of an adult and that of a child
④ the parts of the brain used for analytic and creative thinking
⑤ the flexibility of the adult brain in adapting to new experiences

2. 다음 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 <u>않은</u> 것은?

One should perhaps ask why even very simple animals would prefer familiar stimuli or familiar other animals. A tendency to grow fond of the familiar would help stamp in the ① <u>preference</u> for a stable environment (so animals might leam to like their homes). It would certainly promote stable social bonds. Imagine, for example, that nature programmed animals in the ② <u>opposite</u> way, so that familiarity led to contempt or some other form of disliking. How would families stay together? How would friendships, alliances, or other partnerships ③ <u>survive</u>? If you always preferred a stranger to someone you knew, social life would be in constant turmoil and turnover. In contrast, if you automatically grew to like the people you saw ④ <u>regularly</u>, you would soon prefer them over strangers, and groups would form and stabilize easily. Given the advantages of stable groups (e.g., people know each other, know how to work together, know how to make decisions together, know how to adjust to each other), it is not surprising that nature ⑤ <u>removed</u> animals that grew to like (rather than dislike) each other on the basis of familiarity.

* contempt: 경멸 ** alliance: 동맹 *** turmoil: 혼란

8. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

On June 17, 1953, Mrs. Roosevelt traveled to Hiroshima, where she visited the Atomic Bomb Casualty Commission, an American research group that studied the effects of the nuclear attacks on bomb survivors. Many people had been injured by the fires that the bomb had caused.

(A) It led her to urge Americans to do more to help. Though she maintained that they were not America's direct responsibility, " as a gesture of goodwill for the victims of this last war, such help would be invaluable."

(B) After her official meetings, some girls were waiting to see her. The girls explained that they did not blame her for the atomic bomb; they only wanted to impress on her the need to ensure that these weapons were never used again on human beings, given their effects.

(C) Although she did not say so directly, the girls may have been among those whose faces were permanently disfigured by the attack. This must have been a powerful encounter because Mrs. Roosevelt called it a " tragic moment."

* casualty: 피해자 희생자

** disfigure: (외양을) 흉하게 만들다

① (A) - (C) - (B)
② (B) - (A) - (C)
③ (B) - (C) - (A)
④ (C) - (A) - (B)
⑤ (C) - (B) - (A)

9. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?

But none of this intergroup variation and intragroup commonality would have anything to do with the workings of culture.

Cultural and behavioral diversity can result from humans' innate ability to flexibly respond to their environments, to engage in social learning, and to make culture (an ability which is itself a part of the social suite). (①) The diversity might conceal an underlying universality that, paradoxically, might relate more to our genes than to cultural exigencies. (②) Evolutionary psychologists John Tooby and Leda Cosmides provide a fanciful illustration of this idea. (③) They suggest a thought experiment in which aliens replace humans with jukeboxes, each of which has a repertoire of thousands of songs and the ability to play a particular song according to where and when it is. (④) We would then observe that jukeboxes in different parts of the world played different songs at different times, songs that were similar to those on the jukeboxes near them. (⑤) This is a way of illustrating that humans might have an inborn ability to respond flexibly – but also predictably - to their environment.

* innate: 타고난 ** exigency: 필요성. 본질적 요구

12. 다음 빈칸에 들어갈 말로 가장 적절한 것은?

As Marshall McLuhan suggested so presciently in 1964, “the medium is the message," which means that, beyond the content that is conveyed, the medium itself has an impact by its very nature and unique characteristics. For example, the use of socia1 media means that we have less need to interact with others directly. This distancing of communication has real implications for children’s development. If learning to communicate with others is a skill that develops with practice, children’s constant use of social media reduces the experiences they have with which to learn social skills. McLuhan asserts that we are so focused on the content of the technology that we neglect to notice the influence of the technology itself on people. This observation is certainly true today: we focus on what the technology provides (e.g., video, text messages, socia1 media), but we fail to consider _____.

* presciently: 예지력 있게

① how much these technologies benefit us
② that technology is just a container for thought
③ how the very act of using these advances shapes us
④ why it is challenging for us to adapt to technological advances
⑤ that new technology helps children’s development in multiple ways

13. 다음 빈칸에 들어갈 말로 가장 적절한 것은?

We are a11 familiar with battles between reason and desire. Socrates asks whether there are thirsty people who don’t wish to drink. lndeed there are. (A sign on a faucet that reads “nonpotable water, do not drink" won’t take away a person’s thirst, but she won’t want to drink there.) Yet there is something paradoxical about this: the word “ thirsty" means“ wishes to drink." So we are imagining people who wish to drink and do not wish to drink. How could that be? “It is obvious that the same thing will not be willing to do or undergo opposites in the same t of itself, in relation to the same thing, at the same time. So, if we ever find this happening in the soul, we’11 know that _____. " ln other words, since no one thing can both wish to drink and not wish to drink (in the same way at the same time), no one thing can have both of those two characteristics; we thus manage this by being more than one: one t of the soul wishes to drink, and another does not wish to drink.

* faucet: 수도꼭지 ** nonpotable: 마실 수 없는

① what we end up doing is the better action
② we aren’t dealing with one thing but many
③ our actions are rarely caused by our reason
④ doing one thing leads to doing another thing
⑤ thought and action can work together in harmony

[정답 및 해설]

1) ⑤

오랫동안 성인의 뇌는 우리가 필요로 할 모든 뉴런과 주요 연결부를 가진 본질적으로 '고정된' 것으로 실제로 널리 믿어졌다. 물론 우리는 항상 새로운 것을 배우고 사물에 대한 이해를 업데이트하는데 이는 학습과 기억을 관장하는 네트워크에서 새로운 연결이 정기적으로 형성되고 교체되고 있다는 것을 뜻한다. 하지만 전체적인 물리적 구조와 주요 연결부, 즉 우리를 '지금의 우리'로 만드는 것의 측면에서 보면, 성인의 뇌는 '완성된' 것으로 오랫동안 여겨져 왔다. 하지만 최근 몇 년 동안 성인의 뇌는 변화하고 적응'할 수' 있고, 심지어 새로운 뉴런을 생성'할 수'도 있으며, 경험이 뇌를 여전히 재구성할 수 있는데, 우리가 황혼기에 접어들 때 조차도 그러하다는 것을 보여주는 증거가 꾸준히 이어져 왔다. 혼잡한 런던 거리를 계속 운전하고 주행하는 것이 해마 크기의 증가를 가져오고 이는 성인의 뇌 구조가 어느 정도 적응성이 있다는 사실을 밝히고 있는 택시 운전사를 대상으로 한 연구를 생각해 보라.

2) ⑤

왜 매우 단순한 동물조차 익숙한 자극이나 익숙한 다른 동물들을 선호하는지 아마도 질문해 봐야 할 것이다. 익숙한 것이 좋아지는 경향은 (동물이 자신의 집을 좋아하는 것을 배울 수 있도록) 안정된 환경에 대한 선호를 새겨 넣는 것에 도움이 될 것이다. 그것은 틀림없이 안정적인 사회적 유대를 촉진할 것이다. 예를 들어, 자연이 정반대의 방식으로 동물을 길들여서 익숙함이 경멸이나 다른 형태의 혐오를 낳도록 했다고 상상해 보라. 가족은 어떻게 함께 지낼 것인가? 우정, 동맹 또는 다른 동반자 관계는 어떻게 살아남을 수 있을 것인가? 여러분이 항상 아는 사람보다 낯선 사람을 선호한다면, 사회생활은 끊임없는 혼란과 전복에 놓일 것이다. 반대로 여러분이 정기적으로 만나는 사람들을 자연히 좋아하게 된다면, 여러분은 곧 낯선 사람보다 그들을 선호하게 될 것이고, 집단이 쉽게 형성되고 안정화될 것이다. 안정된 집단의 장점(예를 들면, 사람들은 서로를 알고, 함께 일하는 방법을 알고, 함께 의사를 결정하는 방법을 알고, 서로에게 적응하는 방법을 안다)을 고려해 볼 때, 자연이 익숙함을 기반으로 서로를 (싫어하는 대신에) 좋아하게 된 동물을 없앤(→ 선호한) 것은 놀라운 일이 아니다.

3) ⑤

모든 과학 지식과 관련 기술이 지속 가능성에 기여한다는 의심의 여지가 없는 가정은 지구의 문제들을 해결하기 위한 객관적 지식의 중요성에 대한 믿음에서 비롯된다. 과학자는 그러한 놀라운 일을 하는 데 이용될 수 있는 특별한 형태의 지식을 제공한다는 점에서 권력을 얻고 우리 시대의 사제가 된다. 그리고 우리는 흔히 그것을 과학적 지식에 대한 최종 시험으로 여기는데, 우리가 그것의 결과를 가지고 일을 '실행할' 수 있다는, 이를테면 멸종 위기종의 감소를 되돌리기 위해 그것을 적용하는 것이다. 그럼에도 불구하고, 우리는 이제 과학과 사회적 결과 사이의 관계에 대한 선형적 관점에 결함이 있다는 것을 알고 있다. 과학은 우리가 무언가를 할 수 있게 할지 모르지만, 더 광범위한 맥락적, 사회생태학적 문제를 통합해야만 우리는 지속 가능성에 대한 그것의 기여도를 평가할 수 있다. 실제로는 우리가 문제를 설정하는 방식을 먼저 재평가해야 할지도 모르는데도 불구하고, 우리는 보통 지속 가능성을 현실 세계에서 무언가를 하는 것으로 생각한다.
